CM146, Winter 2019 Problem Set 0: Math prerequisites Due Jan 14, 2019 at 11:59 pm

Submission instructions

- Submit your solutions electronically on the course Gradescope site as PDF files.
- If you plan to typeset your solutions, please use the LaTeX solution template. If you must submit scanned handwritten solutions, please use a black pen on blank white paper and a high-quality scanner app.

Although many students find a machine learning class to be rewarding, we do assume that you have a basic familiarity with several types of math. Before taking the class, you should evaluate whether you have the mathematical background the class depends upon.

- Multivariate Calculus (at the level of a first undergraduate course, e.g., Math 32A and 32B at UCLA). For example, we rely on you being able to take derivatives and integrals. During the class you might be asked, for example, to derive gradients of multivariate functions.
- Linear Algebra (at the level of a first undergraduate course, e.g., Math 33A). For example, we assume you know how to multiply vectors and matrices, and that you understand matrix inversion, eigenvectors and eigenvalues. During the class, you might also be asked to also learn about methods for matrix factorization.
- Probability and Statistics (at the level of a first undergraduate course, e.g., Statistics 100A). For example, we assume you know how to find the mean and variance of a set of data, that you are familiar with common probability distributions such as the Gaussian and Uniform distributions, and that you understand basic notions such as conditional probabilities and Bayes rule. During the class, you might be asked to calculate the likelihood (probability) of a data set with respect to some given probability distribution, and to then derive the parameters of the distribution that maximize this likelihood.

This assignment helps you self-evaluate whether you have the background to succeed in the class. For each of these mathematical topics, we provide below (1) a minimum background test and (2) a moderate background test. If you pass the moderate background test, you are in excellent shape to take the class. If you pass the minimum background but not the moderate background test, then you can still take the class, but you should expect to devote extra time to fill in necessary math background. If you cannot pass the minimum background test, we suggest you fill in your math background before taking the class.

You may find the following resources helpful:

This assignment is adapted from course material by William Cohen, Ziv Bar-Joseph (CMU) and Jessica Wu (Harvey Mudd).

- Andrew Ng's CS229 Course (Stanford)
 - Linear Algebra Review (http://cs229.stanford.edu/section/cs229-linalg.pdf)
 - Probability Theory Review (http://cs229.stanford.edu/section/cs229-prob.pdf)

Additional resources are available on the course syllabus.

Necessary Minimum Background Test [45 pts]

While you are welcome to use online resources, such as Wolfram-Alpha, you should be able to solve these problems by hand.

1 Multivariate Calculus [2 pts]

Consider : What is the partial derivative of with respect to

2 Linear Algebra [8 pts]

Consider the matrix and the vectors and below:

(a) What is the inner product

(b) What is the product !!!

(c) Is \blacksquare invertible? If so, give the inverse; if not, explain why not.

(d) What is the rank of ...?

3 Probability and Statistics [10 pts]

- (a) What is the sample mean for this data?
- (b) What is the unbiased sample variance?
- (c) What is the probability of observing this data assuming that a coin with an equal probability of heads and tails was used? (i.e., The probability distribution of (i.e.)) = 0 (i.e.)
- (d) Note the probability of this data sample would be greater if the value of the probability of heads (1) was not 0 to but some other value. What is the value that maximizes the probability of the sample (1) [Optional: Can you prove your answer is correct?]
- (e) Given the following joint distribution between stand stand what is state to the following joint distribution between stand standard what is state to the following joint distribution between standard standar

E0 E0E0 08 040B		E0 OE			
		E0 OF	E0 I 0	E0	
E0 00	E0 OC	0 🛂	0 🛂	0 월	
00	0B	0 65	0 135	0 3	

4 Probability axioms [5 pts]

Let sand be two discrete random variables. In general, are the following true or false? (Here denotes complement of the event sand

- $(a) \quad \overline{\tt GR} \quad \overline{\tt GS} \quad \overline{\tt GS}$
- $(b) \ \ \overline{(ordinary)} = \overline{(ordinary)} + \overline{(ordinary)}$
- $(c) \quad \begin{array}{c} \hline {\tt 60} \\ \hline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \hline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \hline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} + \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline \\ \hline \end{array} = \begin{array}{c} \overline {\tt 60} \\ \hline \end{array} =$
- $(d) \quad \stackrel{\mathsf{E0}}{\overset{\mathsf{C}}{\overset{\mathsf{C0}}{\overset{\mathsf{C0}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}{\overset{\mathsf{C0}}{\overset{\mathsf{C}}{\overset{\mathsf{C0}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}}{\overset{\mathsf{C}}}{\overset{\mathsf{C}}}{\overset{C}}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}{\overset{C}}{\overset{C}}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}{\overset{C}}}{\overset{C}}}{\overset{C}}{\overset{C}}}{\overset{C}}{\overset$

Discrete and Continuous Distributions[5 pts] 5

Match the distribution name to its formula.

- (a) Gaussian
- (b) Exponential
- (c) Uniform
- (d) Bernoulli
- (e) Binomial

6 Mean and Variance[5 pts]

(a) What is the mean and variance of a random variable?

(b) If the variance of a zero-mean random variable is what is the variance of 2 What about the variance of + 3?

7 Algorithms [10 pts]

(a) Big-O notation

i. Note that In denotes log to the base e and Ig denotes log to the base 2.

(b) Divide and Conquer

Assume that you are given an array with \blacksquare elements all entries equal either to 0 or +1 such that all 0 entries appear before +1 entries. You need to find the index where the transition happens, *i.e.*, you need to report the index with the last occurrence of 0. Give an algorithm that runs in time \blacksquare Explain your algorithm in words, describe why the algorithm is correct, and justify its running time.

Moderate Background Test [35 pts]

8 Probability and Random Variables [5 pts]

(b) Law of Large Numbers and Central Limit Theorem

Provide one line justifications.

- i. If a fair die is rolled 6000 times, the number of times 3 shows up is close to 1000.
- ii. If a fair coin is tossed stimes and denotes the average number of heads, then the distribution of satisfies

9 Linear Algebra [20 pts]

(a) **Vector Norms** [4 pts]

Draw the regions corresponding to vectors with following norms (you can hand draw or use software for this question):

(b) Matrix Decompositions [6 pts]

i. Give the definition of the eigenvalues and the eigenvectors of a square matrix.

ii. Find the eigenvalues and eigenvectors of

iii. For any positive integer show that the eigenvalues of are significant the powers of the eigenvalues of matrix and that each eigenvector of sis still an eigenvector of sis.

(c)	Vector	and	Matrix	Calculus	[5	pts]
-----	--------	-----	--------	----------	----	-----	---

Consider the vectors and and the symmetric matrix

i. What is the first derivative of swith respect to

ii. What is the first derivative of with respect to What is the second derivative?

(d) Geometry [5 pts]

i. Show that the vector is orthogonal to the line in the line in the line in the line. What is the inner product in (1911)?)

ii. Argue that the distance from the origin to the line 0 is

Programming Skills

Start familiarizing yourself with the Python libraries numpy and matplotlib by completing the following exercises. (You do not have to submit your code.)

You may find the following references helpful:

- http://docs.scipy.org/doc/numpy/reference/generated/numpy.random.multivariate_normal.html
- http://docs.scipy.org/doc/numpy/reference/generated/numpy.linalg.eig.html

10 Sampling from a Distribution [2.5 pts]

For questions (a-e), only submit your plots. You do not need to submit code.

- (b) How does the scatter plot change if the mean is $\frac{50}{60}$?
- (c) How does the (original) scatter plot change if you double the variance of each component?
- (d) How does the (original) scatter plot change if the covariance matrix is changed to 3 ?
- (e) How does the (original) scatter plot change if the covariance matrix is changed to (a)?

11 Eigendecomposition [2.5 pts]

Write a python program to compute the eigenvector corresponding to the largest eigenvalue of the following matrix and submit the computed eigenvector.

$$\stackrel{\mathsf{E0}}{=} \frac{1}{1} \quad 0$$

.

12 Data [5 pts]

There are now lots of really interesting data sets publicly available to play with. They range in size, quality and the type of features and have resulted in many new machine learning techniques being developed.

Find a public, free, supervised (i.e. it must have features and labels), machine learning dataset. You may NOT list a data set from 1) The UCI Machine Learning Repository or 2) from Kaggle.com. Once you have found the data set, provide the following information:

- (a) The name of the data set.
- (b) Where the data can be obtained.
- (c) A brief (i.e. 1-2 sentences) description of the data set including what the features are and what is being predicted.
- (d) The number of examples in the data set.
- (e) The number of features for each example. If this is not concrete (i.e. it is text), then a short description of the features.

For this question, do not just copy and paste the description from the website or the paper; reference it, but use your own words. Your goal here is to convince the staff that you have taken the time to understand the data set, where it came from, and potential issues involved.
